Course Title	:DESIGN THINKING FOR INNOVATION
Course Code	:25UC1203
L-T-P-S Structure	: 0-0-4-0
Pre-requisite	:
Credits	: 2
Course Coordinator	:Suresh Kumar Grande
Team of Instructors	:
Teaching Associates	:

Syllabus : Introduction to Design Thinking and Innovation: Introduction to design thinking and its principles, Design definitions and stories, desirability, feasibility, viability, mystery, heuristics, algorithm, requirements, patterns, connect, blind spots; Laws of Design Thinking: less is more, last 2% equals 200%, theory of prioritization; Design mind: definitions, 5 forces of growth (SEPIA), 5 frictional forces (DCAFE), 3 capacity levers (VAL), Design thinking for contextualized problem-solving, Incorporating sustainable development goals into design thinking. Design Thinking Process: Overview of the design thinking process, Design framework (L0); Empathy research: understanding user needs and perspectives, Persona development: creating user profiles; Customer journey mapping: visualizing user experiences, Define phase: asking the right questions and problem statement formulation. Ideation, Prototyping and Testing: Ideation techniques, brainstorming and generating creative ideas, Mind Mapping. Identifying patterns and anti-patterns in ideation, Evaluation of ideas using different criteria (10/100/1000 gm) : Prototyping and testing: translating ideas into tangible prototypes. Entrepreneurial Innovation: Introduction to innovation management, Basics of business models and their role in innovation, Financial estimation for innovation projects: Pitch decks: creating persuasive presentations for innovation, Considerations for intellectual property rights (IPR) in innovation, Patent-Complete Specification Document.

Course Rationale : Many projects are often confined to drawing rooms and boardrooms of firms. These projects either fail or do not achieve significant success when it comes to real-world implementation. However, if these projects are designed from a user-centric perspective, with an empathic approach toward the user, the resulting product is more likely to meet user requirements and achieve greater success. In a country like India, where numerous challenges exist, a user-centric approach can lead to innovative solutions, products, and start-ups. While most courses in a curriculum focus on systematic thinking, this course emphasizes lateral thinking through experiential learning for problem-solving. This makes it a unique and essential part of any academic program. This course introduces students to the principles and practices of Design Thinking as a user-centric, innovation-driven methodology for problem-solving. By exploring concepts such as desirability, feasibility, and

viability, students learn to identify contextualized problems and generate creative, sustainable solutions. Through empathic research, persona development, ideation, prototyping, and testing, learners gain practical skills to translate insights into impactful innovations. The course also bridges innovation and entrepreneurship by covering business models, financial estimation, pitching, and Intellectual Property Rights. It equips students with a mindset and toolkit essential for converting design solutions into viable start-up ventures.

Course Objectives : The objective of the course is to design a mindset for developing a user-centric approach to solving a problem and understand the means to transform innovative solutions into start-ups.

COURSE OUTCOMES (COs):

CO NO	Course Outcome (CO)	PO/PSO	Blooms Taxonomy Level (BTL)
CO1	Understand the importance of Design thinking mindset for identifying contextualized problems	PO1,PO2	2
CO2	Analyze the problem statement by empathizing with user	PO2,PO4	4
CO3	Develop ideation and test the prototypes made	PO3	3
CO4	Explore the fundamentals of entrepreneurship skills for transforming the challenge into an opportunity	PO9,PO10	2

COURSE OUTCOME INDICATORS (COIs)::

Outcome No.	Highest BTL	COI-1	COI-2	COI-3	COI-4
CO1	2	Btl-1 Recall the core principles of Design Thinking including desirability, feasibility, and viability in real-world design scenarios.	Btl-2 Explain how the Design Thinking mindset helps identify contextualized problems		
CO2	4	Btl-1 Define the terms and steps of design thinking	Btl-2 Understand the process of empathic research and the steps involved in defining user needs for potential solutions	Btl-3 Develop and apply a customer interview framework and persona template derived from empathic research methods.	Btl-3 Analyze the insights and define the problem statement
CO3	3	Btl-1 Remember the terminology involved in ideation, prototyping and testing.	Btl-2 Explain the procedure to develop ideas, prototypes and test.	Btl-3 Develop prototypes, test, and iterate process to get the best user-centric solution.	
CO4	2	Btl-1 Quote the terminology involved	Btl-2 Understand the process of Intellectual		

		in Entrepreneurship and innovation development	Property Rights (IPR) and the conversion of a Design Thinking solution into an enterprise/start-up pitch.

PROGRAM OUTCOMES & PROGRAM SPECIFIC OUTCOMES (POs/PSOs)

Po No.	Program Outcome
PO1	Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
PO2	Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)
PO3	Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
PO4	Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)
PO9	Individual and Collaborative Team work: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
PO10	Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
