25SC1101- Problem Solving Through C
Home Assignment-4
A.C.Y: 2025-26 Odd Semester

1. Define a type of structure called subscriber that contains the members as name, street, address, and monthly bill (i.e., how much the subscriber owes). Develop a C program to list all the subscribers whose monthly bill is minimal (<750/-).
2. Develop a C program which accepts 4 numbers using command line arguments and finds minimum and maximum among 4 numbers.
3. Develop a C program that reads a string from a file and count number of vowels and consonants in that string
4. Define a structure employee with members id, name, age, and salary. Develop a C Program to store and display given number of employees' information
5. Create an enum for traffic lights (RED, YELLOW, GREEN). Develop a C program that uses a switch statement to print what action a driver should take based on the light color.
